*Most2baly Youth Summer Bootcamp
Final Enrollment Push before Go-Live
PM C1 Team 2*

CONTEXT

As of the July 10, 2026 Enrollment Deadline (Week 9-10 data), the program closed at 39/50 students — an 11-student shortfall (Risk #2, escalated to Sponsor).

This Kanban board manages the final push during the Grace Window (Jul 11-19) before the July 24 Bootcamp Go-Live, applying continuous-flow discipline to what was previously an unmanaged, batch-style enrollment process.

ELEMENT	VALUE
Board Columns	Inquiry → Interview → Payment Pending → Fully Enrolled
WIP Limit (Interview)	Max 5 — prevents interviewer overload, protects Cycle Time
Current Pipeline Snapshot	Inquiry: 20 Interview: 4/5 Payment Pending: 3 Fully Enrolled: 39
Total Students in Pipeline	66 (39 confirmed + 27 in active flow — healthy lead volume, bottleneck is throughput not supply)
Gap to Target	11 more confirmed enrollments needed to reach 50
Governing Methodology	Hybrid — Enrollment TARGET is Waterfall-governed (fixed); Enrollment WORKFLOW uses Kanban (continuous pull)

STUDENT ENROLLMENT KANBAN BOARD (LIVE SNAPSHOT)

Pull System: a card only moves forward when the NEXT column has open capacity — not when the current owner feels ready.

 INQUIRY (no limit)	 INTERVIEW (WIP MAX 5)	 PAYMENT PENDING (no limit)	 FULLY ENROLLED
Lead #1 — Referral	Card #21 — @Omar, interview today 3PM	Card #17 — consent signed, awaiting payment	39 students — see  KPI Reference tab (individual 39 cards omitted for readability)
Lead #2 — Referral	Card #22 — @Omar, interview today 4PM	Card #18 — payment link sent (day 1)	
Lead #3 — Instagram Ad	Card #23 — @Hana, interview tomorrow 10AM	Card #19 — payment link sent (day 2, follow-up due)	
Lead #4 — Instagram Ad	Card #24 — @Hana, interview tomorrow 11AM		
Lead #5 — Instagram Ad			
Lead #6 — Parent Campaign			
Lead #7 — Parent Campaign			
Lead #8 — Referral			
Lead #9 — Instagram Ad			
Lead #10 — Parent Campaign			
Lead #11 — Referral			
Lead #12 — Instagram Ad			
Lead #13 — Parent Campaign			
Lead #14 — Referral			
Lead #15 — Instagram Ad			
Lead #16 — Parent Campaign			
Lead #17 — Referral			
Lead #18 — Instagram Ad			
Lead #19 — Parent Campaign			
Lead #20 — Referral			

 WIP Limit Status: Interview = 4 of 5 — ONE slot open. Per policy, no 5th card may enter Interview from Inquiry until an Interview card exits to Payment Pending or is rejected.

EXPLICIT POLICIES (PRO HACK) & KANBAN METRICS

*Written entry/exit criteria for every column
removes subjective judgment calls about when a card can move.*

Column Transition	Policy Type	Explicit Rule (must be true before the card moves)
Inquiry → Interview	Entry Policy	Student has submitted the online interest form AND parent phone number is verified reachable. WIP Limit check: Interview column must have <5 cards, else this card waits in Inquiry regardless of readiness.
Interview → Payment Pending	Exit Policy	Interview completed AND signed parent consent form received AND interview score ≥ pass threshold (per Charter's age-appropriate fit criteria).
Payment Pending → Fully Enrolled	Exit Policy	Payment received in full OR approved payment plan signed — partial/unconfirmed payment does not count, per Week 6 Budget Bank governance.
Any column → Rejected/Withdrawn	Exception Policy	Card is removed (not left stuck) if: parent does not respond within 3 business days, or family withdraws voluntarily. Removed cards are logged, not deleted, for enrollment funnel analysis.

KANBAN METRICS — DEFINITION & CURRENT READING

Metric	Formula	Current Reading & What It Means
Cycle Time	Time from entering Interview to leaving Interview	~4 days average (Week 9 baseline). Target: keep ≤3 days during the Grace Window by respecting the WIP=5 limit — a smaller batch moves faster per card.
Lead Time	Time from Inquiry submission to Fully Enrolled	~15 days average including the pre-Interview wait. Includes queue time, not just active work — this is what a family actually experiences.
Throughput	Number of cards reaching Fully Enrolled per week	~8-9 students/week needed for the remaining 9 days (Jul 11–19) to close the 11-student gap before Go-Live.

THE HYBRID BLUEPRINT

WATERFALL GOVERNANCE vs AGILE EXECUTION

Confirms and finalizes the Week 3 Hybrid split, now including the Week 12 Kanban layer inside the Agile side.

 WATERFALL GOVERNANCE (Fixed — no deviation)	 AGILE EXECUTION (Flexible — adapts weekly)
Total Budget: \$5,000 fixed (Week 6) — no changes without Sponsor approval above \$500	Workshop Content: built in weekly sprints, adjusted after each session based on student feedback (Week 3)
Enrollment Target: 50 students — non-negotiable per Charter	Guest Speaker Coordination: confirmed 2 weeks out, timing/format adjusted based on student energy levels (Week 3)
Enrollment Deadline: July 10, 2026 (missed at 39/50 — now in Sponsor-approved Grace Window through Jul 19)	Sprint 1 Backlog items (Week 11): R01/R04/R10 delivered on a 1-week cycle, re-prioritized from real focus-group data
Bootcamp Go-Live: July 24, 2026 — fixed, cannot slip	Enrollment WORKFLOW (Week 12 — NEW): day-to-day processing of each student card uses Kanban's continuous pull-flow, not a fixed sprint — arrivals are unpredictable, so flow-based management fits better than batch planning
Bootcamp Completion: August 21, 2026 — fixed	Interview scheduling and follow-up cadence: adjusted daily based on current WIP and Cycle Time, not planned in advance
Marketing Campaign window: May 15 – Jul 10, 2026 — fixed milestones	

 **Key Insight:** Methodology choice is not just project-level — it's process-level. The Enrollment **TARGET** (what/when) is governed by Waterfall because it's a fixed Sponsor commitment.

But the Enrollment **WORKFLOW** (how each card moves day to day) uses Kanban because the arrival of new inquiries is continuous and unpredictable — exactly the condition Kanban was built for, and exactly why Week 3's methodology table marked Kanban 'Not ideal' for the whole project (fixed dates exist) but ideal for this one operational process nested inside it.

IDENTIFY THE BOTTLENECK SCENARIO ANALYSIS

Exercise scenario (as given): 20 students in Inquiry, only 1 in Interview.

Diagnosis

With 20 cards stacked in Inquiry against only 1 in Interview (WIP limit 5, meaning 4 slots sit empty), the constraint is not lead supply — it's Interview processing capacity. Pulling more leads into Inquiry would only grow the queue further; the fix has to happen at the Interview stage itself.

The 2-Sentence Flow Plan

"We will temporarily add a second interviewer (Hana, alongside Omar) and fill all 5 Interview WIP slots from the Inquiry queue within 24 hours, running back-to-back 20-minute interview blocks instead of the usual ad-hoc scheduling. Once the Interview column is running at full WIP capacity with a steady exit rate to Payment Pending, we will resume pulling new Inquiry cards one-for-one — never faster than Interview can absorb them."

Why This Works (Little's Law logic)

Adding a second interviewer directly raises Throughput (more cards exiting Interview per day), which — by Little's Law ($WIP = Throughput \times Cycle\ Time$) — either shrinks Cycle Time or allows more WIP to move through at the same speed. Critically, the plan does NOT raise the WIP limit itself; it fixes the actual constraint (capacity) rather than hiding it by letting more students pile into an already-overloaded stage — which is the exact mistake the Common Mistakes list warns against.
